ONE WOMAN'S STORY OF CONCEPTION AND BIRTH AFTER 15 FAILED FERTILITY TREATMENTS, 3 FAILED SURROGACIES.

**DR. G. BUVANESWARI- DIRECTOR, INSTITUTE OF
REPRODUCTIVE MEDICINE DR. RELA INSTITUTE & MEDICAL CENTRE**

The story of Anita (name changed) and her family is a testament to the fact that miracles can still happen. After more than 15 IVF cycles and 3 failed surrogacies, Anita finally conceived giving birth to a beautiful healthy child.

The couple's journey to parenthood was not easy, but with Dr. Buvanewari's guidance and support, they were finally able to conceive. The couple was overjoyed when they found out that Anita was pregnant and that the baby was healthy.

“A mother’s love knows no bounds, especially for her new bundle of joy.”

We started family planning immediately after a late marriage. From the beginning, we were keen on taking fertility treatment because we felt that would work for us. In this journey of becoming parents, we went through a lot of complexities and challenges. We tried 4 to 5 hospitals and took treatment for a span of 5 to 6 years, experimented with newer and advanced fertility models, addressing Immunology factors- but nothing was moving to the next level and our hope was gradually disintegrating.

After being devastated by the constant failures, we took a break for a few months and then met Dr. Buvanewari from Rela Hospital’s fertility centre. She had such patience and took the time to explore every avenue to try and help me achieve my dream. Her techniques and methods were very different from the ones we tried. The treatment was customized and tailored to my needs.

After a few evaluations and tests, I knew she will be able to conceive in her own womb. While age was one of the factors, Anita had other problems like diminished ovarian reserve and genital tuberculosis. The couple didn’t keep any stone unturned and even considered surrogacy as one of the options but after 3 attempts even that failed. They tried other advanced treatments but nothing seemed to work. I examined her, checked her treatment history, and customized the treatment plan for her.

“I am extremely happy and feel so good that I could help her achieve her dream of becoming a mother. The baby and the mother- both are healthy and doing fine.”
