MIRACLE RECOVERY: A TEEN'S JOURNEY BACK TO HEALTH AFTER FALLING FROM TERRACE.

Vebbin, a 14-year-old boy from Tambaram, met with an unfortunate accident as he fell from the terrace while playing with his pets. He sustained multiple fractures in both lower limbs, lost a lot of blood, and was sent into shock. Looking at his severe state, he was immediately taken to Rela Hospital.

Some of his injuries required expert care to put his joints in working condition. Despite his pain, he was so motivated that he was back to his routine just 12 weeks after a painful surgery. Vebbin's journey to recovery was not only a physical but also a mental and emotional one. It taught him the true meaning of perseverance and the power of the positive spirit.

“14-year-old Recovers After An Accidental Terrace Fall”

Playing with my Rajapalayams was a daily routine for me. But a few months back, while I was playing with them I accidentally fell from the terrace and sustained multiple injuries and fractures in my lower limbs. I was rushed to a nearby hospital but seeing my severe condition they suggested Rela Hospital to me.

I was in a life-threatening situation for 2 days in the ICU, and surgery was successfully performed on my thigh and spinal cord. I am very thankful to Dr. Sunil Gavaskar whose guidance and expertise made me stand on my feet once more. He gave me enough motivation during my rehabilitation phase.

Vebbin came to us with multiple fractures in both lower limbs. He was pushed into a state of shock because of significant blood loss. Some of his injuries were so severe that they needed expert care. We had to put his joints back where they belonged through surgery.

But it was very overwhelming to see his rapid strides in recovery. He was extremely cooperative during his rehabilitation phase and little did he know that his journey to recovery would be one of resilience, determination, and willpower.

“We are extremely happy that within 12 weeks, VeBBin was back on his feet and doing normal activities with 100% recovery.”
