A NEW LEASE ON MOBILITY: ROBOTIC SURGERY EASES KNEE PAIN

Mrs. Vasumathi had been enduring knee pain for ten years until it became unbearable, and she sought medical attention at Rela Hospital. After a thorough examination, Dr. Ashok Sunil Gavaskar discovered that both her knees were damaged, with the left leg being the most problematic.

Mrs. Vasumathi underwent a successful operation, and within three days, she was able to walk without assistance. However, after a few months of relief, an X-ray revealed that the right knee was damaged as well. They opted for Robotic Surgery, and five days later, Mrs. Vasumathi was discharged from the hospital and in much better condition. Today, she is free of knee pain and able to live a more comfortable and mobile life.

The Robotic Knee Replacement was a game-changer

My wife suffered from a knee problem for 10 years. When I went on a tour, her condition worsened, and she was admitted to Rela Hospital. After a test, the doctor suggested knee replacement surgery for both legs, but at that time we decided to do the left leg first. She was absolutely fine and was walking without any assistance.

Two months later during a check-up, the doctor discovered damage to the right knee and suggested Robotic Knee Replacement surgery. After the surgery, my wife recovered well and is doing fine now. We are extremely grateful to Dr. Sunil Gavaskar for his expertise and for giving back a good quality of life to my wife.

She had her mobility back and was able to enjoy simple things like going for walks and playing with her grandchildren without any discomfort

After struggling for a decade with knee pain, the conventional total knee replacement surgery on her left knee provided some relief. However, after 2 months when she came to us for another check-up by then, she began experiencing the same pain in her right knee. She was hesitant to go through the same procedure again.

That was until she heard about the Robotic Knee replacement option. Despite her apprehension about the technology, Mrs. Vasumathi decided to undergo the procedure. The accuracy and precision of the Robotic arm made her feel more confident about the outcome. The Robotic Knee Replacement was a game-changer.
